

REBOUND
ELECTRONICS (UK) LIMITED

Quality Policy

We recognize that the future success of Rebound Electronics depends upon the products and services we supply continually meeting the requirements and expectations of our customers. Our Hybrid Distribution model is helping purchasers safely buy electronic components in today's volatile market.

We understand that our actions and those of our suppliers affect both our customers and our organization. Over 80% of all product purchased comes from Green channel sources. Utilization of a Western owned and operated, ISO9001:2008 approved test house located in Asia, provides additional support and security when sourcing via channels identified as higher risk.

We have in place stringent warehouse inspection procedures. All products, without exception, are photographed and are fully traceable from PO receipt through to Sales Order despatch. With a reject rate of less than 1% our quality statistics speak for themselves.

Through our Management Review Process we continually ensure that our processes remain efficient and relevant allowing us to function effectively and adjust to the varied needs of our customers.

Rebound has ISO9001:2008, ISO13485:2003, AS9120 Rev A accreditation and SC21 Silver award.
